

Being Safe on the Internet

Don't give your phone number or address to people that you don't know very well.

Look closely when you open emails from people you don't know. Could it be a computer virus, or someone trying to trick you?

Be careful when making friends on the Internet. Sometimes people on the Internet will lie about who they are.

Don't forget! If you put words or photos on the Internet, they are there forever!

If you see anything on your email or Facebook that upsets you, or that you don't understand, ask a friend or support person to help.
